## Banner Good Samaritan “goes paperless” by successfully implementing WoundExpert<sup>®</sup>

Banner Good Samaritan  
Medical Center

“Before we implemented WoundExpert, our medical record was completely on paper. It was impossible for us to cost effectively compile the information necessary for quality management and continuous process improvement initiatives.”

Mark W. Loudenslagel, Director  
Wound Care Program & Hyperbaric Medicine

“We recently completed a Joint Commission survey and the surveyor was very impressed with WoundExpert’s comprehensive clinical pain, nutrition, and related risk assessments.”

Patricia Gill, MSN, RN, CWCN, COCN  
Clinical Director

The Wound Care Program and Hyperbaric Medicine at Banner Good Samaritan Medical Center in Phoenix, AZ, is a large physician-based patient clinic performing nearly 1,000 clinical encounters each month.

In June 2005, Banner Good Samaritan achieved Magnet™ designation in nursing excellence from the American Nurses Credentialing Center, ranking the staff in the top three percent in the U.S.

Building on this tradition of excellence, in September 2005, Banner Good Samaritan implemented WoundExpert, replacing its in-house outcomes tracking and paper-based patient medical records with a comprehensive electronic medical record (EMR).

“Before we implemented WoundExpert, our medical record was completely on paper. It was impossible for us to cost effectively compile the information necessary for quality management and continuous process improvement initiatives.”

Mark W. Loudenslagel, Director  
Wound Care Program & Hyperbaric Medicine

The Healthcare Information and Management Systems Society (HIMSS) describes an EMR as satisfying all mandated - HIPAA, CMS, and Joint Commission - security requirements, allowing it to be the legal medical record, eliminating the need for paper charts.

The EMR functions as the clinicians' primary medical record, documenting evidence-based medicine (EBM), continuous improvement, utilization review, risk management, and reimbursement. Finally, HIMSS contends that EMR should support public health reporting, population health initiatives, clinical trials, and research.

Mark Loudenslagel, Director, and Patricia Gill, MSN, RN, CWCN, COCN, Clinical Director, recognized the limitations of their in-house solution and led an EMR requirements analysis initiative. Banner Good

Samaritan reviewed several alternatives, focusing on solutions tailored to the specific needs of ambulatory outpatient wound clinics. For Banner Good Samaritan, the choice was simple: WoundExpert.

Mark and Patricia are confident Banner Good Samaritan has realized all of the aforementioned EMR benefits by implementing WoundExpert.

“The near instantaneous availability of outcome data has helped us improve our processes and approaches with patients,” notes Mark. “Now we are able to perform peer reviews with our entire clinical staff, helping to keep our team focused on the goal of healing our patients in the most cost effective, efficacious way possible.”

Patricia is responsible for clinical operations, direction, and professional development and enthusiastically endorses WoundExpert.

“With WoundExpert, the nursing staff works collaboratively with patients, attending physicians, and family or community caregivers to assure the best outcomes possible. WoundExpert facilitates staff enrichment by allowing nurses to act as case managers in managing treatments and progress toward healing.”

Patricia Gill, MSN, RN, CWCN, COCN  
Clinical Director

WoundExpert's ability to capture complete procedure notes, ancillary services provided, and charges, along with evidence of medical decision making attendant with the provision of care, has improved program reimbursement.

Mark adds, "WoundExpert is used to justify our requests of reimbursement to fiscal intermediaries and managed care providers, aiding the all too thin bottom line of metropolitan ambulatory centers like Banner Good Samaritan."

However, the completeness of data captures and reporting capabilities were not the only considerations in the selection of WoundExpert EMR. Mark and Patricia were required to document hard dollar justification to Banner Good Samaritan corporate administration before moving forward with a decision.

Improved productivity was a crucial element of Banner Good Samaritan's business case for WoundExpert. It is used to track length of visit, number of visits, ancillary services, and supplies used in determining the actual cost of care. This information is also used to analyze staffing levels and program profitability.

WoundExpert also provides soft dollar clinical benefits including patient safety, process improvement, and regulatory compliance.

Patricia concludes, "We recently completed a Joint Commission survey and the surveyor was very impressed with WoundExpert's comprehensive clinical pain, nutrition, and related risk assessments."
